Polynucleotide phosphorylase (PNPase) is a ribonucleolytic enzyme of approximately 59 kDa with both 3' and 5'-exoribonuclease activity that initiates degradation of RNA from 5' ends. Although PNPase only has phosphatase activity, the C-terminal domain of the enzyme (PNPase-C) was shown to phosphorylate RNA more efficiently than ATP. Herein, we show that PNPase-C strongly inhibited ATP-dependent dephosphorylation of functional RNA by phosphatase 3' to the reaction. This inhibition is not due to inhibition of phosphatase activity by PNPase-C as exogenous phosphatase 3' to the reaction had the same effect as PNPase-C. When incubated with functional RNA, PNPase-C first produced a functional protein on RNA primer that was subsequently cleaved by RNase H2. The protein-primed synthesis of functional RNA by PNPase-C might be used in vivo as a gene regulation system.Q: How can I debug a `send_user_feedback` email? I am working on a new company and new to Magento. I used to have a staging server which I would play around with before finally using it on production. I am moving the site from my staging server to my

production server for the first time. I am also trying to send a series of emails and one of them won't send. I am getting a lot of debug messages in the system.log. They look like the following: [2013-03-07 09:54:01] main.DEBUG: SQLSTATE[42S22]: Column not found: 1054 Unknown column 'frontend.email' in 'field list' {"exception":"[object] (Zend_Db_Statement_Exception(code: 42S22): SQLSTATE[42S22]: Column not found: 1054 Unknown column 'frontend.email' in 595f342e71
